CENTRE FOR CONTINUOUS IMPROVEMENT AND DECISION SCIENCE

What We Do!

Business Process and Performance Management, Business Research and Analysis, Continuous improvement, Decision-Making Analysis and Problem Modeling, Change Management, Human Capacity Support Services, Project Management and Advisory Services are our **Core Business**.

Our Consultancy Services

Business Process and Performance

Knowing the current state of an organization's system through detailed process analysis, leads to information on where an organization is succeeding, where is failing and what is responsible for her success and failure. This information is worked upon to develop a periodic and feasible roadmap that will achieve a set of objectives that guarantee organization's stability, improvement, increase in Return on Investment (ROI) and performance through deployment of ideal management strategy, philosophy, tools and techniques.

Business Research and Analysis

The crucible of innovation is research into business system. Every business research leads to collation and analysis of data that will subject a business system to a measure space. Except all business activities can be measured, it will be difficult to control and what cannot be controlled cannot be managed. Business Research and Analysis guarantee that organizations are managed on the basis of facts and figures and not on the rule of thumb.

Continuous Improvement

There is no extreme point in business system where nothing can be improved again. There is always a room for improvement of system of thinking; system of work; system of strategy formulation, development and deployment, and the whole wide enterprise of an organization.

Operations Research Consulting

-Decision-Making Analysis and Problem Modeling.

The most critical business activity in any organization is decision making. Decision determines the direction and strategy of an organization."When decision makers see every decision problem to be deterministic, they always

end up using a hammer."Most decision problems in reality are multiobjective, non-linear, imprecise and in

most cases require being modeled with consideration to the voice of the shareholders, voice of the customers, voice of the society, voice of the environmental dynamics and many other factors. Therefore, decision making requires scientific approach and not a mere "arm-chair" approach that is myopic, rigid, and always deterministic and most time lacks adequate data analysis.

Change Management

Change is inevitable if an organization targets new results. Management system, people's attitude, strategy, tools, techniques, culture are all in dare need of change in order to guarantee stable and competitive business. **Oludoy Dynamix Consulting** steer-up change that is measurable and controllable. We lead a change from the knowledge of the current state of an organization through deployment of applicable best management philosophy, practice, tools and techniques.

Human Capacity Support/Leadership Management

Oludoy Dynamix Consulting works with people in solving diverse decision and management problems within and without an organization and our approach is to transfer knowledge to this people whose responsibility is to continue to provide leadership in the areas of business process management, decision analysis and continuous improvement. We impact, share with, and groom people that have capacities to shoulder their institutional challenges.

Our human capacity support is pivoted on leadership management; we develop leaders that focus on change, personal development and what they can give to their organizations. Our approach to leadership programme is premised on leadership orientation, experimentation, integration and mentorship.

Advisory Services

Advising various institutions on strategy management is our core responsibility. We think for management team to actualize their objectives, we discover the missing links, mend the fences and create conducive environment for work, analyze issues and build a unique advantage for businesses through pre and post maturity assessment driven by qualitative and quantitative data and group participation.

Human Capacity Support-Learning and Development Programme

Lean Enterprise Management

Lean Wide Enterprise is not Lean until its deployment leads to identification of Lean cost potentials that lead to removal of all waste within business /or organization' processes.

The common waste found within most organizations have been categorized under eight types but mostly important is to identify costs that will be saved for an organization by removing these waste termed "Muda, Mura, and Muri" in Japanese language through deployment and application of Lean methodology, tools and techniques.

Oludoy Dynamix Consulting develops and increases human capacity through our research-based training and consulting in Lean Management which identify costs to save and profits to gain through Value Stream Mapping and systemic formulation, deployment and alignment of organizational strategy in an effective and efficient manner.

We offer the following:

- **Creating A Lean Business System**
- **Lean Culture**
- **Staying Lean**
- **Lean Manufacturing**
- **Lean Banking Enterprise**
- **Lean Government**
- **Liquid Lean**
- **Lean Service Enterprise**
- **Lean Green**

Six Sigma Methodology

Knowledge of Six Sigma amount to additional cost of managing an institution when it has not been deployed as a management philosophy and strategic tool to solve business process-inclined problems.

Six Sigma Methodology has been widely applied as a business process management (BPM) to remove defects and errors that characterized business performance and the whole organization 'system.

Oludoy Dynamix Consulting Limited develops and increases human capacity through our research-based training and consulting in Six Sigma Methodology. We offer the following courses to develop and enhance productive human capacity in various organizations.

- **Six Sigma Methodology**
- **Six Sigma Project-Six Sigma Cases**
- **Lean Six Sigma**

Supply Chain Management

The wide enterprise of a business from product/or service order to its fulfillment has a chain of processes and activities that gives an integrated view of both the

valued and non-valued structure and how each activity leads to and affects another. This business wide enterprise system is called supply chain; it spans materials sourcing to product design to production to warehousing to distribution and transportation.

Therefore, supply chain management is a holistic management philosophy to control a business within and without, and position an organization under global practice.

Leadership Management and Coaching

The bureaucratic norm of life management needs a paradigm shift to accommodate dynamic positive change and rising of innovative leaders who will be preoccupied with what they can do far more better to build their society.

Because leadership is everything and everything is about leadership, there is a need to create a systemic approach for evolving formidable leaders and dynamic leadership in all institutions of human engagement. Therefore we can say that there is a sharp difference between **management** and **leadership**, while management is about coping with complexity, **leadership is about developing vision of the future that will simplify complexity and develop new effective ways of achieving unprecedented results; a good manager may never be a good leader but a good leader is invariably an effective manager.**
